Illuminate
your success
with combined
Jet-LED power

JetPeel is a world-leader in jet pressure-energy technology for aesthetic skin care that gets results. JetPeel's exclusive JetPro device is used all over the world to provide non-invasive, needle-free, pain-free aesthetic treatment with no downtime, only visibly glowing, fresh and rejuvenated skin.

Now, JetPeel takes beautiful results to the next level with JetPro Duo: Red & Blue LED add-ons that deliver dual jet-LED treatment, amplifying the JetPeel effects with no added treatment time.

LED add-ons: More powerful on the skin

JetPro Duo delivers all the renowned skin rejuvenating and repair effects of TavTech jet pressure-energy technology – and with LED add-ons to the JetPeel by TavTech handpiece, you can provide simultaneous jet-LED treatments for even better results.

JetPro Duo LED add-ons are based on NASA technology, designed to complement JetPeel's powerful trans-epidermal action.

By combining Red & Blue LED technology with the existing JetPeel technology, you can achieve amplified results with no extra treatment time.

Light the way to extra beautiful skin

JetPro Duo includes Red light and Blue light LED add-ons. These light wavelengths are clinically proven to treat various skin concerns and are the ideal complement to existing JetPeel treatment guidelines.

Choose the LED add-on that best fits the needs of the patient, and use simultaneously with the JetPeel jet pressure-energy handpiece for a combined, ultra-effective jet-LED treatment.

 Red LED add-on (620-630 nm)	 Blue LED add-on (460-470 nm)
Anti-aging Loss of tone and wrinkle Post-acne Lightening and pigmentation	Mild-moderate acne Couperose and sensitive skin Itchy, sensitive scalp

Why LED?

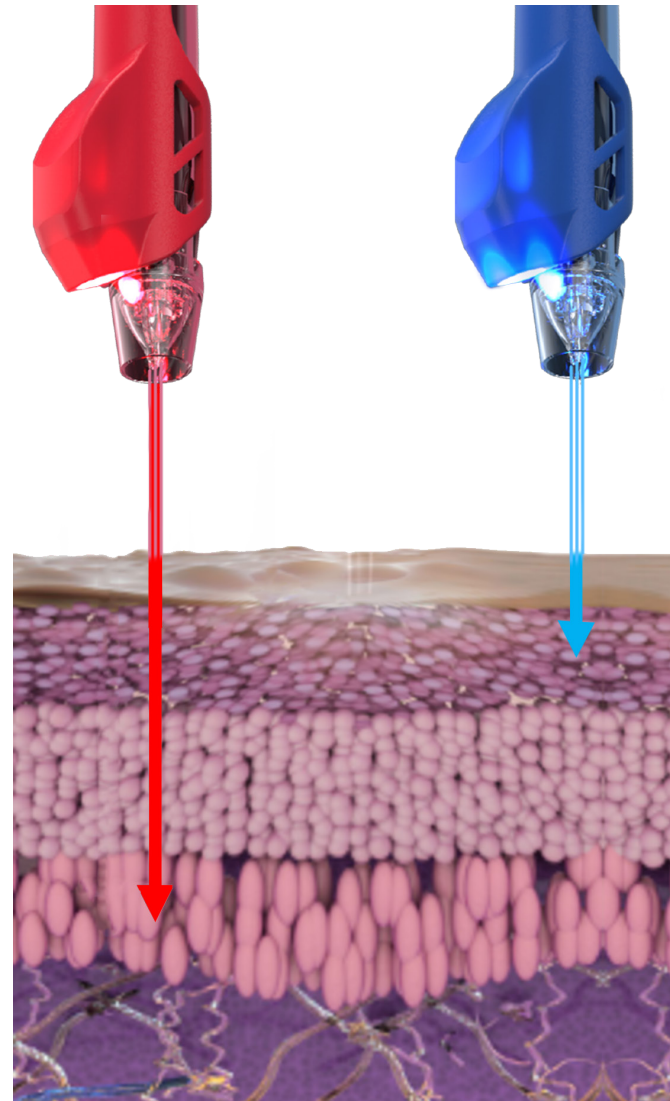

LED, or Light Emitting Diode, is a miniature glass-encased chip that emits a particular wavelength, or light color. The different wavelengths can penetrate different levels of the skin, supporting various aesthetic treatments and benefits. LED light therapy is clinically proven to cause natural photo-biochemical reactions in the skin cells that can lead to rejuvenation and to beautifully smooth results.

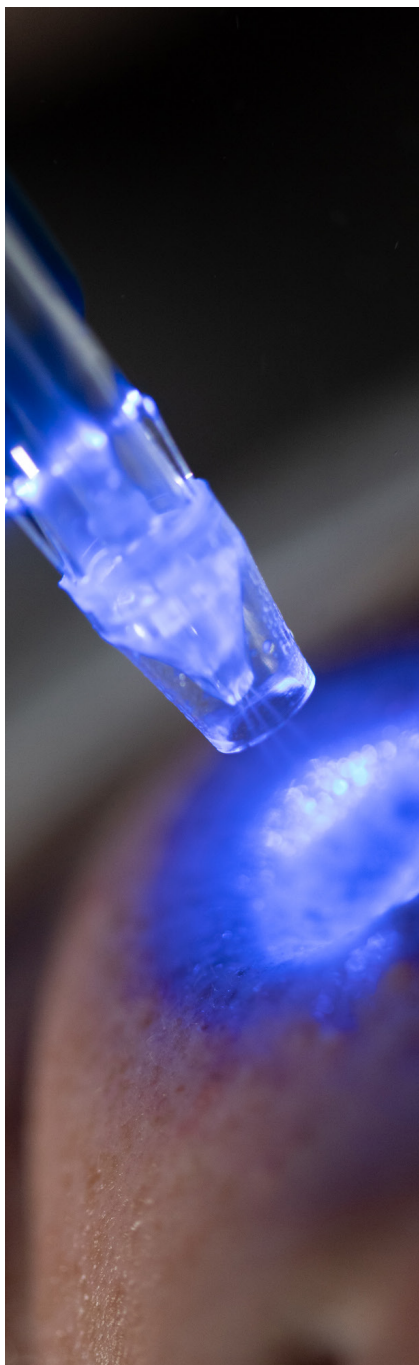

Red light is proven to stimulate fibroblast cells in the deeper layers of the skin, leading to increased collagen production. This can help smooth the appearance of fine lines, and lift and firm the skin, for a fresh, supple and rejuvenated appearance.

In a study of 300 patients, **90% reported softer skin texture and reduced fine lines.**⁽¹⁾

Blue light is renowned for its ability to target the P.acnes bacteria strain that causes acne, penetrating to a maximum skin depth of 1mm. Treatment helps reduce breakouts and soothe irritation, for a more even tone and calmer, smoother skin.

Studies show a decrease in inflammatory lesions in cases of mild to moderate acne.⁽²⁾

Boost the power

With JetPro Duo, you benefit from the combined power of two complementary treatments – jet pressure technology and LED skin therapy.

- **Better results:** By using a Red or Blue LED add-on with JetPeel, you can deliver these two aesthetic technologies simultaneously, helping achieve better treatment results than with a single approach.
- **No added treatment time:** No more treatments one after the other. Because the JetPro Duo combines two simultaneous treatments, you don't need to add any extra time to the session.
- **No extra consumables:** The JetPro Duo LED add-on is all you need – use it just like any JetPeel handpiece and you will be giving your patients the combined Jet-LED effect, without adding any additional consumables.

JetPro Duo is the ultimate win-win, for your clinic and your customers.

Important information

JetPro Duo Contraindications: Open wounds, severe sensitivity to cold, skin neoplasms, active cancer, trigeminal nerve inflammation, active sinusitis or laryngitis, active herpes, active bronchial asthma, thrombosis, pregnant or lactating women, children, infants.

Protective eye gear must be worn while using JetPro Duo.

More than light

JetPro Duo by TavTech is further enhanced with additional improvements and features for an even better, smoother experience for clinician and customer:

- **Quieter:** JetPro Duo operates at 20% reduced noise level during standby and at 10% reduced noise level during treatment compared to JetPro, for a soothing, pleasant in-clinic experience.
- **Improved storage:** The front handle on JetPro Duo provides space for hanging up to 4 handpieces for greater ease of use.
- **Start easier:** On the JetPro Duo device, the Start button is located at the front, for easier start and stop operation.
