

Illuminate JetPeel's success with combined Jet-LED power

JetPeel by TavTech is the world's leading jet pressure energy aesthetic skin treatment powered by unique patented technology that delivers beautiful, healthy and rejuvenated results. The JetPro Duo takes the renowned JetPro by TavTech device to a new level: red & blue LED add-ons that simultaneously deliver dual jet-LED treatments, amplifying the JetPeel effects for results that are more beautiful than ever.

The power of JetPeel, now with combined red or blue LED for simultaneous treatment

The JetPro Duo includes LED add-ons to the JetPeel handpiece in two light wavelengths: red (620-630 nm) and blue (460-470 nm). These wavelengths are clinically proven to treat a range of skin concerns, such as fine lines, signs of aging, mild-to-moderate acne, pigmentation and more. By combining red or blue LED's with jet pressure technology, you can boost the power of JetPeel and your clinic's success.

All benefits, no downsides

With the red & blue LED add-ons, you can simultaneously provide two complementary treatments at once for maximum results. No extra treatment time is required: simply add the LED feature to the JetPeel by TavTech handpiece and deliver the combined jet-LED effect.

Light the way with JetPro Duo

Every year, millions of people worldwide enjoy the benefits of JetPeel: safe, non-invasive and needle-free, suitable for all skin types, with immediate results and no downtime or recovery needed.

With JetPro Duo that combines red or blue LED light therapy, the JetPeel experience is more than it's ever been.
